

MAK DRDO ABD

Save Water | Reuse Wastewater | Stop Pollution

Healthy Environment is Equal to Healthy Life

Do's

- ✓ Anaerobic Bacteria Digestion Septic Tank (ABDST) should be used for the designed / specified capacity only. Weekly once can be used more than five times the capacity (at a party or any special day).
- ✓ Provide a good drainage system in such a way the outlet water/rainwater should not stagnate near ABDST for back flow into ABDST.
- ✓ Proper care should be taken to install ABDST at the level above the ground to prevent rainwater, so that it will not enter the ABDST for any reason.
- ✓ Ensure that no waste other than human waste enters the toilet closet attached to the ABDST.
- ✓ Use separate dustbins to dispose of all solid/liquid waste matters without connection to ABDST.
- ✓ Ensure toilet closet can be cleaned twice in a week using less than 30 ml having less than 100 ppm concentration in Harpic, Domex, Lizol, R7, etc., cleaner as recommended by DRDO.

Ensure all the above instructions strictly followed.

Don't

- ✗ Excess human wastewater should not be let into the ABDST.
- ✗ Running tap water should not enter into the toilet closet which is connected to ABDST.
- ✗ If the running tap water is not closed, the excess water let out into ABDST will wash away the bio bacteria from ABDST and will have zero results in terms of the digestion of human wastewater.
- ✗ Rainwater should not enter into ABDST.
- ✗ Compulsory avoid throwing non-bio-degradable items like plastic bottles, huggies, tea cups, papers/polythene bags, sanitary napkins, soaps, cigarettes, beedis, diapers, medical waste, medicine plastics/wrappers, metals, rubbers, rubbish, chemicals, etc. into toilet closet.
- ✗ Do not close the gas vent pipe provided in the ABDST at any time.

Do not take ease of any of the above instructions
